

AppendPDF

Version 1.1
March 25, 2009

This program requires the Microsoft Framework 2.0 or higher.

AppendPDF allows you to append, insert, remove and rearrange pages in PDF Files and to combine/concatenate PDF files. For a similar program for non-PDF graphics files (TIFF, etc) consider the AppendTIFF program.

If you need to re-arrange pages (pagination) in just one file, simply select that file and press the OK Continue button; you will be prompted later to set the page order. To combine several files, select all the files to be combined, arrange them in the correct order and press the OK Continue button. If you want to combine files and also re-arrange pages, make sure that you check the checkbox of the files where pagination is required before you press the OK Continue button.

- Make sure that none of the affected files are open in other applications.
- Make sure that all affected files are safely backed up. Some PDF formats and compressions are not supported. This may result in corrupted output files. Always check the output file after processing.
- Click on the 'Select Folder and Files' button and select one or more files from the folder. From within a folder, use the CTR to select several files, or use SHIFT to select a range of files. Alternatively, you can drag-and-drop the files from the Windows Explorer into AppendPDF.
- Repeat Step 4 for additional files in same or different folder. You can add the same file several times. This allows you to insert pages from different files intermixed with pages from one file, for example pages from file A and pages from file B arranges like AAABBBAAA.
- In the line-up of listed files, using the Up and Down arrows, re-position the files in the order that you wish them to be appended. Click on 'Remove' button to remove a file from the list. To view any of the files and pages, click on 'View File' button.
- If you need to re-arrange or exclude individual **pages** within a file, check the file name's checkbox. The system will then stop before processing the checked file so that you can re-arrange or exclude pages.
- Click on OK Continue button. In the Save As prompt, specify the Save file name. The extension name is optional. Follow the prompts. If you have checked one or more files, the system pauses at that file and you can select and re-arrange the pages. In the Pages list, only the pages selected will be processed. You have also an option to view individual pages.
- Review the output file.

To **re-arrange the pages** or to **delete pages** in a multi-page PDF file, follow this procedure:

- Select the PDF file in the AppendPDF main window.
- Check the checkbox for that file.
- Click on OK button. Enter the output file name (must be different from the source file; you can rename it back after validated processing).
- A window with a list of all pages appears. With the up and down arrow reposition the pages. Select (highlight) the pages that should be included.
- Click on OK button.
- Review the output file. Rename the file back to original name.
